CASPIAN SEA WEEKLY BULLETIN №39

FORECAST OF LEVEL AND SURGE PHENOMENA IN THE CASPIAN SEA ON SEPTEMBER 24 - 29, 2026

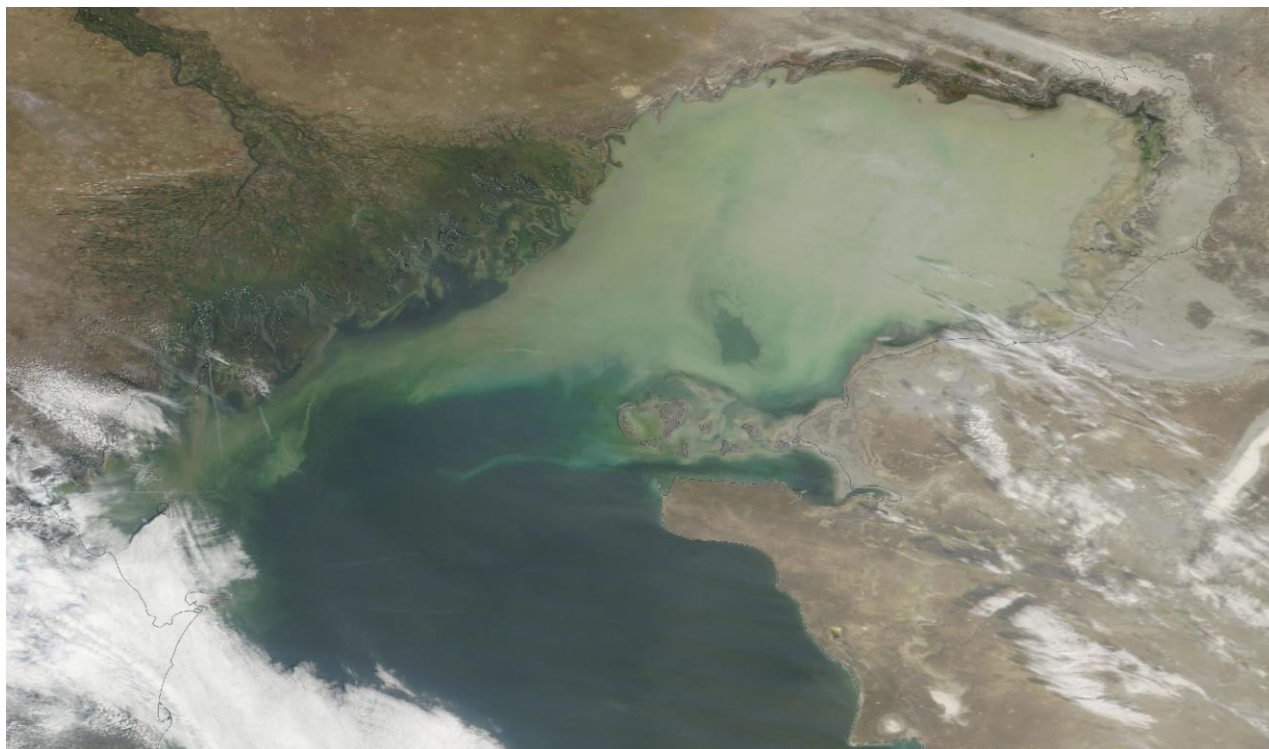

Fig.1 Space image of the Caspian Sea, September 24, 2026 (NASA/GSFC)

SURGEY PHENOMENA.

*At the Fort-Shevchenko station, sea level set-up fluctuations of up to **16 cm** are expected, from minus 29.48 m BS to minus 29.33 m BS.*

*At the Peshnoy station, sea level set-up fluctuations of up to **17 cm** are expected, from minus 29.10 m BS to minus 28.93 m BS.*

*At the Kulaly station, sea level set-up fluctuations of up to **18 cm** are expected, from minus 29.44 m BS to minus 29.27 m BS.*

Middle part of the Caspian Sea

SEA LEVEL.

In the period on September 22-29, the sea level is expected to fluctuate around the mark of minus 29.43 m BS. The range of fluctuations in sea level is from minus 29.70 m BS to minus 29.05 m BS. In the area of Fort Shevchenko,

Kuryk, Fetisov, Aktau, Saura, Kuryk, Peschanyi and Makhachkala sea level fluctuations will not exceed **13 cm** (Figure 2).

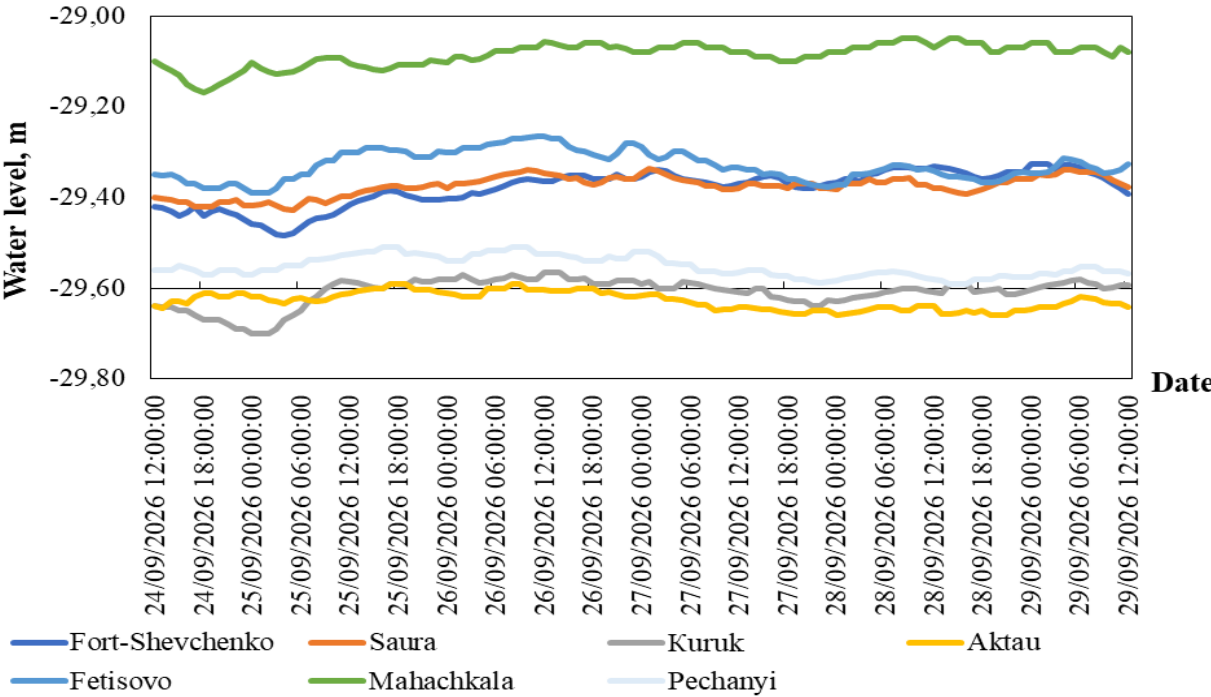

Fig.2 Forecast of sea level in the points of the Middle Caspian

Northern part of the Caspian Sea

SEA LEVEL

In the period the sea level is expected to fluctuate around the mark of minus 29.12 m BS. The range of fluctuations in sea level is from minus 29.07 m BS to minus 29.20 m BS. In the area of Peshnoy sea level fluctuations will **not exceed 13 cm** (Figure 3).

REVIEW

CASPIAN SEA WATER STAGE FROM SEPTEMBER 17 - 23, 2026

In the northern part of the Caspian Sea, according to operational data from marine stations of Kazhydromet: Peshnoy, Kulaly island and Roshydromet (isl. Tyuleniy), the average sea level corresponded to minus 28.82 m BS, the maximum minus 28.87 m BS, the minimum minus 29.45 m BS.

According to the operational data of the sea stations of Kazhydromet: Fort-Shevchenko, Aktau, Fetisovo, Saura, Kuryk, Peschanyi and Roshydromet (Makhachkala), the average value of the level of the Caspian Sea, in its deep part, corresponded to minus 29.46 m BS, the maximum minus 29.05 m BS, the minimum minus 29.76 m BS.

CRITERIA OF DANGER OF THE STORM SURGES IN THE NORTHEAST COAST

	Rise/Fall, cm	Characteristic***	Consequences
Up surge	49	Critical	Flooded coast area to 5 km
	60	Danger	Flooding and flooding of dams and buildings up to 10 km
	109	Especially danger	Flooding of the coast for more than 10 km, destruction of dams and buildings
Down surge	-46	Critical	worsening navigation conditions for small ships
	-60	Danger	Worsening of navigation conditions for small and medium-sized ships
	-104	Especially danger	Ships would be aground

** The calculated characteristics were obtained using the hydrodynamic module of the MIKE 21 Flow Model, adapted in RSE "Kazgidromet" to the conditions of the Caspian Sea. Data of sea level measurements and pressure field numerical forecasting for 24 –120 hours were used in computation.*

*** At definition of characteristic marks local conditions were considered.*

**** Critical – 50 % frequency, danger – 25 % frequency, especially danger– 2 % frequency. The calculation was carried out for the period 1940-2024 according to the data of Peshnoy station.*

BS – Baltic System

The bulletin was compiled by the Department of Hydrometeorological Research of the Caspian Sea
