RSE Kazhydromet

Changeable October....

The beginning of October turned out to be rainy in most of the Republic, which was due to the passage of the atmospheric fronts of the Southern Cyclone. Heavy rains were observed in the south, southeast and east of the country from October 01-06, 08. On October 04, heavy rains were observed at the Sholakkorgan meteorological station (hereinafter - MS) in Turkestan region – 20 mm (norm 13 mm), at Saudakent MS in Zhambyl region – 19 mm (norm 17 mm). On October 05, up to 43 mm fell in the mountainous regions of the Almaty region, but there was no excess of the norm for the month: Almaty MS – 29 mm (norm 50 mm), Medeu MS - 34 mm, Kamenskoe Plateau MS - 43 mm (norm 64 mm), Issyk MS – 30 mm (norm 49 mm). On October 07, heavy rain was observed in Samarka (East Kazakhstan region) - 23 mm (norm 35 mm).

In the second and third decades of the month, an anticyclonal type of weather was observed in Kazakhstan, as a result, precipitation was less than normal. The exception was the eastern regions of the country, where unstable weather persisted. In the middle of the month, the first snow fell in mountainous areas, at the beginning of the third decade heavy snow was observed: on October 21-22, Leninogorsk MS - 14 mm (norm 62 mm), on October 23, Markakol MS -19 mm (norm 50 mm), Ulken Naryn MS - 15 mm (norm 38 mm). Also, the first snow fell in the south-east of the country and immediately heavy, on October 23 at MS Lepsi – 13 mm (norm 56 mm).

During the month, most of the country received warm air masses from the regions of Iran, and on some days it was summery hot, especially in the west and south of the country. The air temperature in the west and southwest rose to +18+27 °C during the daytime, in the south and southeast at the beginning of the month to +31 ° C, in the north, northwest, east and in the center to +10+20 ° C. However, in the second and third decades of the month, cool air masses began to arrive in the eastern half of the country from the regions of Western Siberia, which caused a decrease in air temperature. In the center, east and south-east of the country, night air temperatures dropped to -3-15°C, on October 25 in MS Lepsi (Zhetisu region), the air temperature dropped to -19.9 °C.

In the first decade of the month, gale force winds of up to 15-28 m/s were often observed in Kazakhstan, and very strong winds with gusts of up to 30-41.5 m/s were observed in the southeast of the country on October 05 - 06, 09, 15, 21 at Dostyk AMS.

In Astana, the average monthly air temperature was +6.1°C, which was 1.1° higher than normal, with a normal (+5.0°C). The highest air temperature was recorded on October 02 and amounted to +17.7°C. The lowest air temperature in the capital was recorded on October 25 and was -5.0°C. Precipitation for the month was 31 mm, which is about the norm (the norm for the month is 26 mm).
